Digital Map Storytelling Bootcamp

Alex Chaucer, Skidmore

In this hour long MAKE session, participants will learn how digital mapping tools, such as ArcGIS Online and Google Earth, can be used for telling geographic stories and sharing online. Included in the session will be a hands on activity including mapping a spreadsheet of coordinates in ArcGIS Online, and georeferencing a historic map in Google Earth, creating a .kmz file, and creating a tour. Examples will be shown of other extensions of these tools in the digital humanities and other similar products. Session is geared toward the introductory user with no experience with mapping tools.

Prerequisite: Please come to the session with Google Earth installed on your computer and having created a free ArcGIS Online account with username and password.
