

THATCamp @Union College September 26-27, 2013

Arduino Bootcamp

Wenhua Shi, Colgate University

Arduino is a tool for making computers that can sense and control more of the physical world than your desktop computer. It's an open-source physical computing platform based on a simple microcontroller board, and a development environment for writing software for the board. In this hour long MAKE session with demonstrations of a few prototypes and art projects, participants will build paper circuits and learn a beginner level of Arduino programming.
